ET 225

Upgradeable Memory Typewriter

Display for electronic correction and operator guidance
Automatic correction of the last 500 typewritten characters
Permanent memory for storage of frequently used phrases and formats
Removable cartridge for document storage and editing
Internal clock for display of the time and automatic dating of documents

Display

The 26 character display helps you to type an error-free document on your first try. Text can be reviewed and corrected electronically as it is being typed, before errors are committed to paper. The display also serves as a guide when editing a document so that you can visualize the corrected copy before reprinting the page. The display includes a memory use indicator to show you how much storage area is still available and a service area for displaying helpful messages.

Correction buffer

The last 500 typewritten characters can be easily accessed for automatic correction, regardless of where they are located on the page. Two relocate keys are used for instant positioning at either the start of the correction memory or the last typewritten point, while movement backward or forward in the correction memory can be handled by character, word or line increments.

olivetti PROCART
REVISION TYPING 101
made in italy

Procart 101

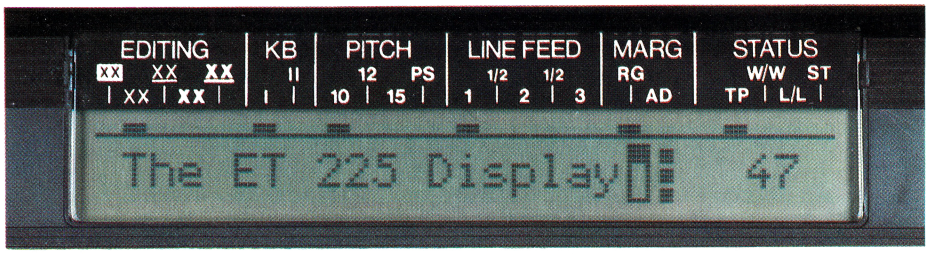
By inserting this cartridge you may store up to 5 thousand characters and access revision typing capabilities for use with recorded documents. Up to 36 documents may be recorded on a cartridge, utilizing the following features:

Sequential search: Move forward or backward through a text by character, word, line or paragraph to reach and display a point of correction.

Global search: Directly access a point of correction by simply identifying the string of characters to be located.

Stop codes: For form letters requiring the insertion of variable information, stop codes may be entered to indicate those points in a document where printing should stop for you to insert unique information (such as a name and address).

List function: In order to remind you what documents are recorded on the cartridge, you may display a list of the names and the first 16 characters of each text.



Cursor selection of operating conditions

Selection of these operating conditions is made by simply moving the cursor through the available options appearing above the display:

Edit: Used to select the desired print variation;

Normal	ET 225
Underscore	ET 225
Bold	**ET 225**
Bold Underscore	**ET 225**
Reverse	**ET 225**

Keyboard: National, International or Teletex

Pitch: 10, 12, 15, or proportional spacing

Line Feed: Normal carriage return, automatic carriage return, or right margin justification

Status: Typewriter, line by line display, word by word display, store (a phrase or page format)

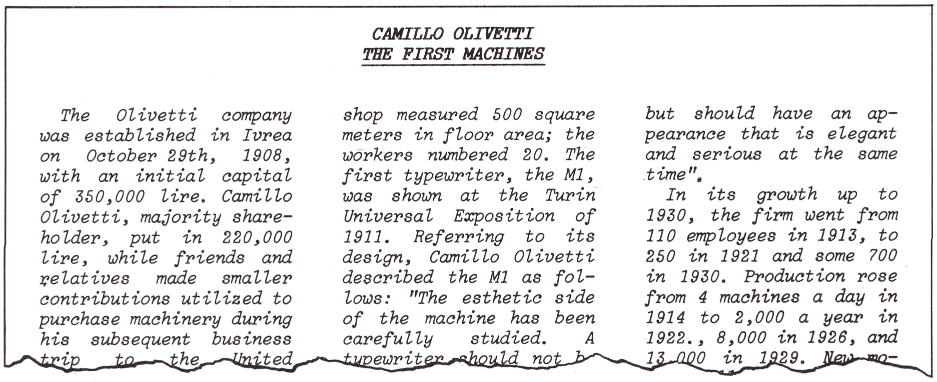
Column layout, decimal alignment and vertical line printing

Simplify your statistical typing by letting the ET 225 calculate column widths and tab positions, decimally align columns of numbers, and print vertical lines between columns automatically.

Multi-column typing

Save valuable time completing typing jobs requiring printing in columns with right margin justification by utilizing the ability to instantly "shift" margin and tab settings for the next column position.



CAMILLO OLIVETTI
THE FIRST MACHINES

The Olivetti company was established in Ivrea on October 29th, 1908, with an initial capital of 350,000 lire. Camillo Olivetti, majority shareholder, put in 220,000 lire, while friends and relatives made smaller contributions utilized to purchase machinery during his subsequent business trip to the United

shop measured 500 square meters in floor area; the workers numbered 20. The first typewriter, the M1, was shown at the Turin Universal Exposition of 1911. Referring to its design, Camillo Olivetti described the M1 as follows: "The esthetic side of the machine has been carefully studied. A typewriter should not b

but should have an appearance that is elegant and serious at the same time".

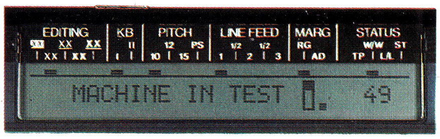
In its growth up to 1930, the firm went from 110 employees in 1913, to 250 in 1921 and some 700 in 1930. Production rose from 4 machines a day in 1914 to 2,000 a year in 1922., 8,000 in 1926, and 13,000 in 1929. New mo-

Superscripts and subscripts

Typing of equations, formulas, and footnotes is simplified by instructions to print above or below the normal line.

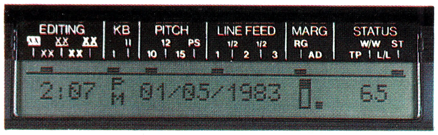
Repeat key

The repeat key saves a great deal of time by making any character and most function keys "repeating keys."



Autodiagnostic program

Every time you turn the machine on a quick test of its main components is performed. This instantly alerts you to any potential problems or malfunctions, simplifies the technician's job and reduces downtime by performing the necessary adjustments and determining which components must be replaced.



Clock and dater

The time and date can be displayed at any time, even in the middle of typing a text. In addition, the date can be printed automatically in the format of your choice, at any point in a document.

Permanent memory ①

Store frequently used blocks of text in the memory so that you will no longer be obliged to retype repetitive phrases. Page layouts can be stored as well, so that the completion of a preprinted form takes only a fraction of the time normally required. Even margin and tab settings can be stored in the memory for quick recall, eliminating the need to clear and reset margins and tabs between projects.

Centering ②

The ET 225 handles any conceivable centering requirement—between margins, around a point, between vertical lines, between any two typewritten points—automatically, with no calculations whatsoever on your part.

Alignment with the right margin ③

With just one instruction either a phrase or a group of centered lines can be aligned with the right margin, eliminating the need to set tabs or manually align text on the right side of the page.

Paragraph or line indentation ④

Blocks of text that must be indented from the left margin can be typed and indented automatically so that you no longer have to tab or space to the position on each line.

Dear Mr. Stevenson:

②

SUBJECT: OLIVETTI ET 225

Thank you for giving me the opportunity to demonstrate the ET 225 for you this morning. As I mentioned earlier, the versatility of this product will allow you to access the following features which you mentioned would be essential:

Features

① ④

Centering
Right Alignment of a Group of Centered Lines
Decimal Alignment
Vertical Line Printing
Paragraph or Line Indentation
Superscripts and Subscripts
Column Layout
Global Search
Automatic Dating
500 Character Buffer

①

In addition, the ET 225 is a product designed to grow with your business. As your requirements expand, so will the capabilities of the ET 225.

I will contact you shortly to arrange an appointment for presenting our written proposal.

Sincerely yours,

①

PAGE END WARNING!

Paper feed

You can instruct the ET 225 to feed a sheet of paper directly to the specific starting line that you prefer. This insures that typing will begin in exactly the same position on all the pages of a project.

End of page control

You may have the ET 225 print a constant number of lines per page. While typing or recording a document, you will be alerted when the number of lines you require has been typed so that you do not accidently type too far down on the page. This feature is also very helpful when printing a document from the memory. By instructing the machine to stop after printing a specific number of lines, you can walk away and attend to other business while it is printing a page. When the printing stops, you simply change the paper and depress start when you are ready to begin printing again.

This feature combines with the Automatic Paper Feed to assure perfect page balance every time.

ET 225 specifications
Writing line: 13.2″
Paper capacity: 17″
Printer: 100 character daisy wheel
Pitch selection: 10, 12, 15, or proportional spacing
Print speed: Up to 16 cps
Line spacing selection: 1, 1½, 2, 2½, 3
Power supply: 115-220 V
Frequency: 50-60 HZ
Dimensions: 23¼″ W x 19.4″ D x 9.2″H
Weight: 41.5 lbs.
Display: 26 character LCD
Phrase/format memory: 620 characters
Correction buffer: 500 characters
Document memory: 5K per cartridge

Interchangeable ribbon cartridge
Available in four versions:
Fabric (capacity 500,000 characters)
Carbon (capacity 85,000 characters)
Correctable carbon (capacity 85,000 characters)
Multistrike carbon (capacity 300,000 characters)

Correction tape
Lift-off (capacity 2,000 characters)
Cover-up (capacity 2,000 characters)

Note: Both the 620 character phrase/format memory and the 5K Procarts are non-volatile to assure that the contents will not be lost when the machine is switched off.
